

REFERENCE ReFuels

“ Since our collaboration began in 2024, agriportance GmbH has proven to be a trusted and professional partner in biomethane brokerage for the UK transport fuel sector .

In this regulated market, agriportance demonstrates strong market insight and a clear focus on aligning with our specific requirements. The brokerage of suitable biomethane producers has consistently been conducted in a transparent, prompt, and solution-oriented manner. Communication has always been open and collaborative, enabling seamless transactions with producers. We particularly value agriportance's proactive approach and the reliability with which it integrates and balances the interests of all parties involved.

Today, agriportance plays an important and influential role in the brokerage of biomethane suppliers for the UK fuel market and has established itself as a key reference in the biomethane market in Germany and across Europe. We look forward to continuing our collaboration in an increasingly dynamic and demanding market environment.”

Biomethane Business Development
ReFuels – Decarbonising transport with biomethane

ReFuels is the leading fully integrated energy supplier, specialised in sourcing and supplying biomethane for transportation. Positioned at the sweet spot of the biomethane supply chain, we manage the whole supply chain from upstream sourcing in The Hague, Netherlands, to downstream distribution through our expanding network of public-access CNG stations in the United Kingdom.

Since its establishment, ReFuels has been a pioneer in the biomethane industry, shaping innovative solutions and building partnerships across the entire biomethane value chain — from well to wheel. Our mission is clear: to empower companies to switch to green, clean, and sustainable fuel, helping them cut harmful emissions while benefiting from our efficient, reliable, and cost-effective service.

ReFuels owns and operates the largest biomethane refuelling station network in the UK, supplying over 90% of the country's CNG heavy goods vehicles. With 16 Bio-CNG stations in operation today, more than 2,200 trucks refuel daily, and in 2024 alone we enabled reducing over 240,000 tonnes of CO₂ emissions. Our goal is to expand this network to 30–40 stations by the end of 2026, supported by a strong blue-chip customer base.

Bio-CNG, is the only proven, scalable, and immediately available solution to decarbonise heavy transport today. It delivers up to 90% lower emissions compared to diesel, reduces operating costs, and provides a reliable and efficient pathway to net-zero transport.

ReFuels is also expanding its European biomethane sourcing portfolio, targeting supply from more than 20 countries, offering short-, mid-, and long-term Biomethane Purchase Agreements directly with producers, and developing biomethane production assets to strengthen integration and secure supply. By connecting upstream producers with downstream demand, we create stable and competitive routes to market for biomethane producers, while ensuring a reliable long-term supply for our customers.

By working collaboratively across the entire biomethane value chain, we deliver transparent, reliable, and scalable solutions that accelerate Europe's transition to renewable fuels. We look forward to continuing a strong and successful cooperation with agriportance in this shared mission.
